SUMMARY

Final-year Computer Science undergraduate pursuing Software Engineering with hands-on experience in building scalable, real-time systems and architecting Agentic AI workflows. Combines technical execution with strong product thinking, deeply curious about user behavior and dedicated to leveraging AI-assisted coding tools to accelerate prototype development.

EDUCATION

International University – Vietnam National University HCMC

Expected Graduation: Sep 2027

Bachelor of Science in Computer Science

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Software Engineering, Database Management, Web Application Development, Object-Oriented Analysis and Design.
- **Achievements:** Second Runner-Up - GDGoC Hackathon VietNam 2026, Academic Encouragement Scholarship – Spring 2025.

EXPERIENCE

Software Engineer Intern – ZiniSoft Co., Ltd

Jul 2026 - Present

Kindie (kindergarten management platform) · Node.js (Sails.js) · MongoDB · React · React Native · GitLab

- Built the bulk Excel import for 10+ entity types (students, parents, classes, staff, menus, leave requests): validate, preview, commit flow with row- and cell-level errors in the UI and commit blocked until all are resolved; upsert matching on business keys that rejects ambiguous multi-match rows, with application-level rollback on failure.
- Implemented server-side sorting with filtering and pagination across ~20 list screens, including computed and cross-collection fields (invoice outstanding amount, student name).
- Delivered other backend features, business-logic changes, and UI fixes across the platform from the lead's requirements.

PROJECTS

SalinAI, agentic AI IoT system for smart agriculture | Team of 3

Apr - May 2026

React.js · Node.js · Express.js · MongoDB Atlas · Firebase · LangChain.js · Socket.io

- Designed a 4-agent pipeline (Researcher, Orchestrator, Planner, Evaluator) with LangChain.js that turns sensor data into irrigation and hardware-control decisions.
- Built a RAG pipeline on MongoDB Atlas Vector Search to ground irrigation guidance in retrieved technical documents instead of static rules.
- Added a human-in-the-loop feedback memory (farmer feedback stored as lessons retrieved in later decisions), token-level reasoning streaming over Socket.io, and guardrails that block control actions in extreme weather.

Taskora, collaborative Kanban system | Personal Project

Mar - Apr 2026

React.js · Node.js · Express.js · MongoDB · Socket.io

- Implemented real-time board sync with Socket.io rooms, so all members see changes instantly without refreshing.
- Implemented JWT authentication and role-based access control middleware for workspace permissions.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C

Backend: Node.js, Sails.js (Waterline), Express.js, FastAPI, REST APIs, JWT/RBAC

Frontend/mobile: React.js, React Native, HTML/CSS, Tailwind CSS

Databases: MongoDB, MySQL, PostgreSQL, Redis, Firebase

Tools: Git, GitLab, GitHub, Postman, Docker

English: Proficient
